## **Projects**

**Recommendation Engine** took 100k rows of movie data containing user ratings. Depending on these I created a function to recommend films to a selected user.

Whitespace Interpreter wrote a program that reads text files containing only tab, space or new line characters to control the flow of operations on a stack.

**Sunka** as part of the software engineering module we built the board game Sunka into an Android application. We built our own interface library and implemented animations, multiplayer and computer player.

**Various hackathon projects** including a map where tweets are located and colored according to sentiment analysis, my own version of bomberman, and a 'smart' garbage bin that detects when it's about to get full.

# **Experience**

London, UK, June - August 2015

Intern at Red Badger Built a rota management tool from scratch. Since it was an internal tool we had the opportunity to work closely with the users. Using a Kanban board as a ticketing system, Git for version control and CircleCl for continous integration we managed to implement agile methodology.

London, UK, December 2014 - June 2015 Collaborator at Wevolver Helped a community of makers bring their building instructions to the website. Participated in projects like InMoov Robot and OpenWheels.

San Jose CA, USA, March 2012 - August 2012 Junior marketing analyst at Senn Sofas Independently identified problems in product market fitness of sofas by surveying reselling conditions. Proposed new distribution channels.

Guangzhou, China, 2011

Freelancer sourcing asisstant Located companies that manufacture specific products requested by clients wanting to source from China. Arranged the necessary shipping and customs documents.

#### Extracurricular

#### **Staff Liaison Commitee**

Course students representative September 2015 - now

#### Web Summit 2015

Operations volunteer Novermber 2015
